## 5. Workflow

### Guard Patrol System Components:

PC, Patrol Software, USB Fingerprint Scanner/Card Issuer, Patrol Device, Charging/Acquisition Base, USB Cable, Checkpoints (Location Tags).

## 6. Operation Instructions

1. **Power On:** Press power button to start the patrol device, waiting it vibrates and boots up.
2. **Power Off:** Press power button and hold for 3 seconds to shutdown the device.
3. **Sleeping Mode:** The device will enter sleeping mode if there is no operation within 20 seconds (default), this time could be configured by software. Press power button once to wake the device up and once again to make it sleep.

### 4. Start to patrol

- 1) Place finger or swipe card on the patrol device to sign in at first, the screen will display patroller's name, ID number and prompts to begin patrolling under a specified route.
- 2) Go to the first checkpoint and swipe the patrol device to the location tag, the screen will display current and next point name, and the device will request to verify patroller's identity if it's preset in the software. There are four verification types : no, only fingerprint, only card, card or fingerprint. Please verify as required and complete verification within 20 seconds.(Verify 3 times does not pass, the default validation fails.)
- 3) Once the patroller is verified, the screen will display events to select for this checkpoint. These events shall be preset in the software and it's optional to apply.
- 4) After the event is recorded, the screen instructs next point to check, just do the same steps as above while following the route preset by software till the device notify that final point is checked, thus the patrol is completed.

Note: If the patroller wants to quit or end the patrol, please verify his identity by fingerprint or card. If the patroller goes to wrong checkpoints, the screen will prompt and instruct the correct point to check.

5. **Out of Memory:** The device will notice its available capacity if there are less than 500 records left, the screen will prompt each time when a new record is generated.

Note: When the record number reaches 30,000, the device will automatically delete the oldest 10,000 records.

6. **Battery:** The battery level is displayed in the status bar on the screen; please recharge the device when there is only one cell of battery bar left. When the device battery is dead, you need to charge about 10 minutes and then start.
7. **Communication:** The device shall be connected to PC via charging/acquisition base by a USB cable and make sure the device is not in sleeping mode.
8. **Working temperature:** -10℃ ~+40℃.

## 7. Power Connection

The device charging power is DC5V, the current is 800mA.

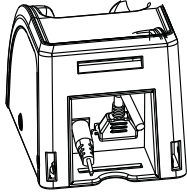

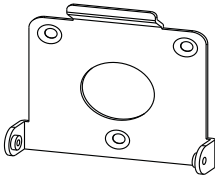

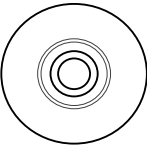

## 8. USB Connection

The device connects with PC though USB cable.

## 9. Packaging List

<b>Patrol Unit</b> 	<b>Charging/Acquisition Base</b> 	<b>Rear Plate</b> 
<b>USB Cable</b> 	<b>Quick Start Guide</b> 	<b>Protective Tube</b>
